**Doosan Robotics Americas Launches as North American Headquarters, Unveiling
Expanded Automation Solutions**

Exton, PA — January 14, 2026 — Doosan Robotics announces the official reincorporation of ONExia Inc. as Doosan Robotics Americas, effective January 1, 2026. Following the acquisition finalized in September 2025, the Exton, PA facility now serves as the North American headquarters for Doosan Robotics, marking a strategic expansion of the company's collaborative robotics and turnkey automation capabilities in the Americas.

In spring 2026, Doosan Robotics Americas will open a new 90,000-square-foot facility in Malvern, PA, uniting cobot manufacturing and solutions engineering under one roof. This integration enables end-users to source complete automation systems directly from a single manufacturer—combining Doosan's advanced collaborative robot technology with comprehensive turnkey solutions.

The ONExia brand will continue as the solutions division of Doosan Robotics, leveraging 35+ years of engineering expertise and proven integration experience to deliver cutting-edge cobot work cells. Working in close alignment with Doosan R&D in Korea, this structure strengthens the company's presence in the Americas while expanding capabilities beyond collaborative robot manufacturing to include end-to-end automation solutions.

"By integrating ONExia's solutions-driven approach with Doosan's advanced cobot technology and resources, we are redefining how manufacturers access automation," said Tim Pelesky, Director of Sales at Doosan Robotics Americas. "Customers can now source complete systems directly from the robot manufacturer—from cobot arms to fully engineered work cells—with ONExia Solutions provided by Doosan Robotics."

Doosan Robotics is investing significant resources into the Pennsylvania headquarters, establishing U.S.-based inventory, support, and training for collaborative robot arms. Combined with ONExia Solutions' engineering capabilities, customers will benefit from streamlined purchasing, faster deployment, and enhanced support for their most challenging automation projects.
